

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (currently amended) Spray-drying device, comprising a vertical drying chamber which comprises:
 - a material feed for supplying material which is to be spray-dried,
 - an atomization means for atomizing the material which is to be spray-dried,
 - a drying-gas feed for supplying drying gas,
 - a drying-gas discharge for discharging drying gas,
 - a material discharge for discharging spray-dried material,
 - filter means for separating entrained fine particles out of discharged drying gas, and
 - fine-particle removal means for removing fine particles which have been deposited on the filter means from the filter means, ~~characterized in that~~wherein the spray-drying device also comprises fine-particle

JC20 Rec'd PCT/PTO 1 6 JUN 2005

collection means for collecting the fine particles which have been removed from the filter means by the fine-particle removal means, the collected fine particles and the spray-dried material being separate products.

2. (currently amended) Spray-drying device according to claim 1, ~~characterized in that~~wherein the fine-particle collection means comprise at least one separate compartment of the drying chamber, the filter means and the fine-particle removal means being arranged in the at least one compartment, and the drying-gas discharge being in open communication with the drying chamber via the at least one compartment.

3. (currently amended) Spray-drying device according to claim 2, ~~characterized in that~~wherein at least one compartment is in direct communication with the drying chamber by means of at least one opening in a wall thereof.

4. (currently amended) Spray-drying device according to claim 3, ~~characterized in that~~wherein the at least one compartment is in communication with the drying chamber by means of a group of at least two openings in a

wall thereof, which openings are distributed evenly over the periphery of the drying chamber.

5. (currently amended) Spray-drying device according to claim 4, ~~characterized in that~~wherein the at least one compartment is in communication with the drying chamber by means of at least two groups of openings arranged at different heights in the drying chamber.

6. (currently amended) Spray-drying device according to ~~one or more of the preceding claims~~claim 1, ~~characterized in that~~wherein the filter means comprise one of a bag filter ~~or and~~ a filter hose.

7. (currently amended) Spray-drying device according to ~~one or more of the preceding claims~~claim 1, ~~characterized in that~~wherein the fine-particle removal means comprise means for reversing the flow of drying gas.

8. (currently amended) Spray-drying device according to ~~one or more of the preceding claims~~claim 1, ~~characterized in that~~wherein the fine-particle collection means also comprise fine-particle treatment means.

9. (currently amended) Spray-drying device
according to ~~one or more of the preceding claims~~claim 1,
~~characterized in that~~wherein the fine-particle collection
means also comprise fine-particle conveyor means.

10. (currently amended) Spray-drying device
according to claim 9, ~~characterized in that~~wherein the
fine-particle conveyor means comprise a perforated plate
through which gas can be blown.

11. (currently amended) Spray-drying device
according to claim 9 ~~or 10~~, ~~characterized in that~~wherein
the fine-particle conveyor means comprise a discharge
opening leading to the drying chamber.
